## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

**Amendments to the Claims**

Claim 1 (Currently amended): Seed of hybrid maize variety designated X1179J, representative seed of said variety having been deposited under ATCC Accession number [[\_\_\_\_\_]]PTA-5468.

Claim 2 (Previously presented): A maize plant, or a part thereof, produced by growing the seed of claim 1.

Claim 3 (Original): Pollen of the plant of claim 2.

Claim 4 (Original): An ovule of the plant of claim 2.

Claims 5-76 (Canceled)

Claim 77 (Previously presented): A tissue culture of regenerable cells produced from the plant of claim 2.

Claim 78 (Previously presented): Protoplasts produced from the tissue culture of claim 77.

Claim 79 (Previously presented): The tissue culture of claim 77, wherein cells of the tissue culture are from a tissue selected from the group consisting of leaf, pollen, embryo, root, root tip, anther, silk, flower, kernel, ear, cob, husk and stalk.

Claim 80 (Currently amended): A maize plant regenerated from the tissue culture of claim 77, said plant having all the morphological and physiological characteristics of hybrid maize plant X1179J, representative seed of said plant having been deposited under ATCC Accession No. [[\_\_\_\_\_]]PTA-5468.

Claim 8281 (Currently amended): A method for producing an F1 hybrid maize seed, comprising crossing the plant of claim 2 with a different maize plant and harvesting the resultant F1 hybrid maize seed.

Claim 8382 (Currently amended): A method of producing a male sterile hybrid maize plant comprising transforming at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited as [[\_\_\_\_\_ and \_\_\_\_\_]]PTA-5506 and PTA-4528 respectively, with a nucleic acid molecule that confers male sterility and crossing said inbred maize parent plants to produce said male sterile hybrid maize plant.

Claim 8483 (Currently amended): A male sterile maize hybrid plant produced by the method of claim 8382.

Claim 8584 (Currently amended): A method of producing an herbicide resistant hybrid maize plant comprising transforming at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited as [[\_\_\_\_\_ and \_\_\_\_\_]]PTA-5506 and PTA-4528 respectively, with a transgene that confers herbicide resistance to generate an herbicide resistant inbred maize parent plant and crossing said inbred maize parent plants to produce said herbicide resistant hybrid maize plant.

Claim 8685 (Currently amended): An herbicide resistant hybrid maize plant produced by the method of claim 8584.

Claim 8786 (Currently amended): The herbicide resistant hybrid maize plant of claim 8685, wherein the transgene confers resistance to an herbicide selected from the group consisting of: imidazolinone, sulfonylurea, glyphosate, glufosinate, L-phosphinothricin, triazine and benzonitrile.

Claim 8887 (Currently amended): A method of producing an insect resistant hybrid maize plant comprising transforming at least one of inbred maize parent plants GE534640 and

GE567914, representative samples of which have been deposited as [[      ] and  
\_\_\_\_\_] PTA-5506 and PTA-4528 respectively, with a transgene that confers insect resistance to generate an insect resistant inbred maize parent plant and crossing said inbred maize parent plants to produce said insect resistant hybrid maize plant.

Claim 8988 (Currently amended): An insect resistant maize plant produced by the method of claim 8887.

Claim 9089 (Currently amended): The insect resistant maize plant of claim 8988, wherein the transgene encodes a *Bacillus thuringiensis* endotoxin.

Claim 9190 (Currently amended): A method of producing a disease resistant hybrid maize plant comprising transforming at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited as [[      ] and  
\_\_\_\_\_] PTA-5506 and PTA-4528 respectively, with a transgene that confers disease resistance to generate a disease resistant inbred maize parent plant and crossing said inbred maize parent plants to produce said disease resistant hybrid maize plant.

Claim 9291 (Currently amended): A disease resistant hybrid maize plant produced by the method of claim 9190.

Claim 9392 (Currently amended): A method of producing a hybrid maize plant with decreased phytate content comprising transforming at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited as [[      ] and  
\_\_\_\_\_] PTA-5506 and PTA-4528 respectively, with a transgene encoding phytase to generate an inbred maize parent plant with decreased phytate content and crossing said inbred maize parent plants to produce said hybrid maize plant that confers decreased phytate content.

Claim 9493 (Currently amended): A hybrid maize plant with decreased phytate content produced by the method of claim 9392.

Claim 9594 (Currently amended): A method of producing a hybrid maize plant with modified fatty acid metabolism or modified carbohydrate metabolism comprising transforming at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited as [[\_\_\_\_\_ and \_\_\_\_\_]]PTA-5506 and PTA-4528 respectively, with a transgene encoding a protein selected from the group consisting of stearyl-ACP desaturase, fructosyltransferase, levansucrase, alpha-amylase, invertase and starch branching enzyme to generate an inbred maize parent plant with modified fatty acid metabolism or modified carbohydrate metabolism and crossing said inbred maize parent plants to produce said hybrid maize plant that confers modified fatty acid metabolism or modified carbohydrate metabolism.

Claim 9695 (Currently amended): A hybrid maize plant produced by the method of claim 9594.

Claim 9796 (Currently amended): The hybrid maize plant of claim 9695 wherein the transgene confers a trait selected from the group consisting of waxy starch and increased amylose starch.

Claim 9897 (Currently amended): A maize plant, or a part thereof, having all the physiological and morphological characteristics of the hybrid maize plant X1179J, representative seed of said plant having been deposited under ATCC Accession No. [[\_\_\_\_\_]]PTA-5468.

Claim 9998 (Currently amended): A method of introducing a desired trait into a hybrid maize line-variety X1179J comprising:

(a) crossing at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited under ATCC Accession Nos. as [[\_\_\_\_\_ and \_\_\_\_\_]]PTA-5506 and PTA-4528 respectively, with another maize line that comprises a desired trait, to produce F1 progeny plants, wherein the desired trait is selected from the group consisting of male sterility, herbicide resistance, insect resistance, disease resistance and waxy starch;

- (b) selecting said F1 progeny plants that have the desired trait to produce selected F1 progeny plants;
- (c) backcrossing the selected progeny plants with said inbred maize parent plant to produce backcross progeny plants;
- (d) selecting for backcross progeny plants that have the desired trait and morphological and physiological characteristics of said inbred maize parent plant;
- (e) repeating steps (c) and (d) three or more times in succession to produce selected fourth or higher backcross progeny plants;
- (f) crossing said fourth or higher backcross progeny plant with the other inbred maize parent plant to generate a hybrid maize line variety X1179J with the desired trait and all of the morphological and physiological characteristics of hybrid maize line variety X1179J listed in Table 1 as determined at the 5% significance level when grown in the same environmental conditions.

Claim 10099 (Currently amended): A plant produced by the method of claim 9998, wherein the plant has the desired trait and all of the physiological and morphological characteristics of hybrid maize line variety X1179J listed in Table 1 as determined at the 5% significance level when grown in the same environmental conditions.

Claim 101100 (Currently amended): The plant of claim 10099 wherein the desired trait is herbicide resistance and the resistance is conferred to an herbicide selected from the group consisting of: imidazolinone, sulfonylurea, glyphosate, glufosinate, L-phosphinothricin, triazine and benzonitrile.

Claim 102101 (Currently amended): The plant of claim 10099 wherein the desired trait is insect resistance and the insect resistance is conferred by a transgene encoding a *Bacillus thuringiensis* endotoxin.

Claim 103102 (Currently amended): The plant of claim 10099 wherein the desired trait is male sterility and the trait is conferred by a cytoplasmic nucleic acid molecule that confers male sterility.

Claim 104103 (Currently amended): A method of modifying fatty acid metabolism, phytic acid metabolism or carbohydrate metabolism into a hybrid maize ~~line~~ variety X1179J comprising:

- (a) crossing at least one of inbred maize parent plants GE534640 and GE567914, representative samples of which have been deposited under ATCC Accession Nos. as [ ] and [ ] PTA-5506 and PTA-4528 respectively, with another maize line that comprises a nucleic acid molecule encoding enzyme selected from the group consisting of phytase, stearyl-ACP desaturase, fructosyltransferase, levansucrase, alpha-amylase, invertase and starch branching enzyme;
- (b) selecting said F1 progeny plants that have said nucleic acid molecule to produce selected F1 progeny plants;
- (c) backcrossing the selected progeny plants with said inbred maize parent plant to produce backcross progeny plants;
- (d) selecting for backcross progeny plants that have said nucleic acid molecule and morphological and physiological characteristics of said inbred maize parent plant;
- (e) repeating steps (c) and (d) three or more times in succession to produce selected fourth or higher backcross progeny plants;
- (f) crossing said fourth or higher backcross progeny plant with the other inbred maize parent plant to generate a hybrid maize ~~line~~ variety X1179J that comprises said nucleic acid molecule and has all of the morphological and physiological characteristics of hybrid maize ~~line~~ variety X1179J listed in Table 1 as determined at the 5% significance level when grown in the same environmental conditions.

Claim 105104 (Currently amended): A plant produced by the method of claim 104103, wherein the plant comprises the nucleic acid molecule and has all of the physiological and morphological characteristics of hybrid maize ~~line~~ variety X1179J listed in Table 1 as determined at the 5% significance level when grown in the same environmental conditions.

Claim 406105 (Currently amended): A method for producing a maize seed, comprising crossing the plant of claim 2 with itself or a different maize plant and harvesting the resultant maize seed.
